DETAILED ACTION

Allowable Subject Matter

2. Claims 2-5 and 9 allowed.
3. Claims 16 –19 and 23 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 15, 20-22, 24, 25 rejected under 35 U.S.C. 103(a) as being unpatentable over Aoki et al. (4,760,389) in view of JP 4-299571 further in view of JP 6-120505

Regarding Claim 15, 20-22, 24 and 25, Aoki et al. disclose a transmitting type display device where in Fig. 2 and Claim 1, it's disclosed a thin film transistor device with source/drain regions/electrode, gate electrode, amorphous semiconductor layer and protective/passivation layer. Aoki et al. fail to disclose the required fixed charges prevention structure between the semiconductor layer and protective/passivation layer and the required porous semiconductor layer between the semiconductor layer and the passivation film. However, JP 4-299571 discloses an amorphous silicon thin film transistor for color liquid crystal display where the required fixed charges prevention configuration between the protective/passivation layer and the

semiconductor layer. Furthermore, JP 6-120505 discloses an active matrix operation TFT structure with amorphous silicon in at least part of interface between island shaped semiconductor layer and the passivation layer.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required fixed charges prevention structure and the porous semiconductor layer in the required configuration in Aoki et al. as taught by JP 4-299571 and JP 6-120505 respectively, in order to have a liquid crystal display device with better reliability.
